

Robosod

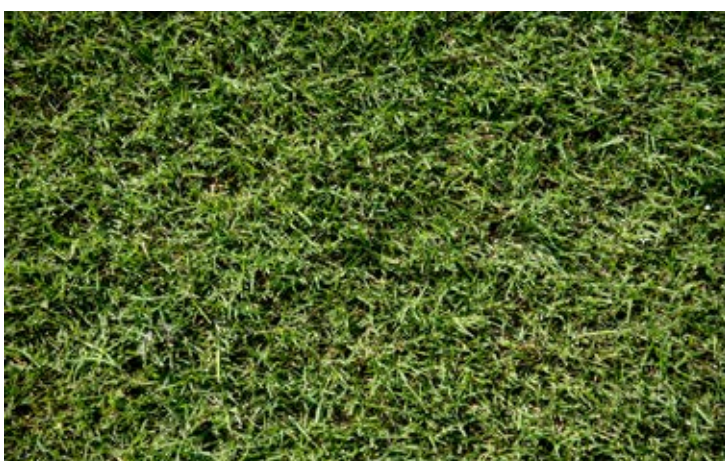

50% SEMI-DWARF BERMUDAGRASS
50% KENTUCKY BLUEGRASS

TOP SOIL	MOWING HEIGHT AT HARVEST	SIZE	TIME FROM PLANTING TO HARVEST
SAND CARPET (93% silica sand - 7% zeolite + biochar)	25 mm	Mini roll (mt. 0,40 x 1,26); Big roll (mt. 1,20 x 9,00)	Over 12 months

Innovative Blumuda type sod consisting of a permanent combination of a cool season and a warm season turfgrass specie. Suitable for all public and private parks and lawn gardens maintained with robot mowers. Ideal around swimming pools, it is also great for golf driving ranges and sports fields

Robot
Mowed Lawns

Product advantages

- ✓ Uniform and year-round elegant turfgrass. In summer, bermudagrass ensures an aesthetically pleasing appearance, making lawn resistant to heat and drought. In winter, bluegrass maintains its intense green color
- ✓ Extraordinary for low frequent mowing with robots. Robotic mowing does not allow one species to prevail over the other through shading
- ✓ Never squeezes down and produces very little clippings. Its resistance to wear is up to 5 times higher than bermudagrass alone
- ✓ Closes divots very quickly, reducing the entry of unwanted weeds. Very resistant to diseases and insects
- ✓ Compared to bermudagrass-only lawns, reduces maintenance costs through the avoidance of post-summer overseeding with ryegrasses
